The Smart Home

Atlantic Cabling, Ltd.
North Lodge
Teddington, TW11 0NP
0800-0935-150
www.atlantic-cabling.com

The UK ranks 3rd in Competitiveness, Availability and Price of Broadband (behind Canada and Japan, and ahead of the USA, Germany and France). As a nation we are quick to appreciate how new technologies can help to make our lives easier and more enjoyable, whether for entertainment, communications, business, education, health, safety, information or business.

A Smart Home integrates telephone, computer, entertainment, lighting, and security systems into its architecture and interior design with elegance and simplicity.

Atlantic Cabling is an independent installer of Smart Home systems. We provide expert independent advice and professional installation services of the best wired and wireless Smart Home systems for your budget and objectives.

Tidy Installations

In Listed Buildings wireless solutions can be utilized to provide discrete access to your Smart Home systems. We take pride in traditional craftsmanship and can hide any required wiring behind custom made trim that match your existing skirting or coving, thus making the components of your Smart Home invisible, even in the most traditional of older homes.

Home Office

As it becomes more common for people to work from home, the importance of a robust home computer network continues to grow. In many homes thick brick walls block wireless signals and the solution is to have a mix of wired network points in some rooms as well as having a wireless access point on each floor.

Home Cinema & Multi-Room Audio

Integrating your TV with your Hi-Fi system creates a much better movie and TV viewing experience. Combining Surround Sound with a High Definition picture (even if it is a small screen) really pulls you into what you are watching.

Controlled Lighting

Integrated interior and exterior lighting provide impressive effects yet are easy to control. Increasingly customers are requesting a mix of traditional light switches for simplicity when entering and leaving rooms but with a master control switch at the front door so all (or selected) lights can be turned on or off when first entering or leaving the home.

CCTV - Sensors - Alarms - Door Entry

Security alarm systems, door entry phones and CCTV cameras with microphones allow you to monitor your home from your TV, computer or mobile phone. For example you can see and speak to someone who rings your doorbell as if you were at home even though your are seeing and speaking to them using your mobile phone anywhere in the world.

Healthcare

Atlantic Cabling works with eHealth and TeleCare practitioners to help the elderly and those with long term conditions live independently. Our systems enable people at home to be monitored by their doctor who can perform check-ups on a moments notice. More routinely, these devices can help with reminders about taking medication and provide comfort by simply keeping in regular contact with their nurse or doctor.
